Dear Hiring Team,

My name is Ivan Galas. I am a software engineer with a strong background in C#, .NET Core, Microsoft Azure, JavaScript, and great debugging skills. I am very motivated and love building my skills. I found this role on LinkedIn.

In my role as a software engineer intern with Prosper IT Consulting, I worked on a team using Microsoft Azure DevOps in an agile environment. I did daily stand ups and communicated clearly with teammates. I worked on a Movie Theatre content managing system that was built using ASP.NET MVC. I added functionality to part of the website using C# that enabled users to upload blog photos. I created the model using C# then I used Entity Framework to update the backend database. I also created the controllers, and view for this.

I would love to work at (COMPANY) because all data has a story to tell and companies like (COMPANY) give it a voice. It would be amazing to work for a company that enables its customer to succeed by providing great software solutions. I hope I get the opportunity to go over my qualifications with you.

Sincerely,

Ivan Galas
